

2024 ANNUAL REPORT

# Hospital Healthcare Management Analysis

Data Overview & Business Insights — A comprehensive performance review for hospital executives and clinical operations leaders.

# Performance at a Glance

This dashboard presents key operational, clinical, and financial metrics across the reporting period — covering patient volume, departmental throughput, treatment costs, and satisfaction outcomes.

2,506

Total Patients

1,280 Female · 1,226 Male

1,679

Inpatients

67% of total patient volume

827

Outpatients

33% of total patient volume

161

Avg Cost/Patient

Total treatment cost: \$404,488

# Who We Serve

## Gender Distribution

## Patient Type Distribution

**Key Observation:** Gender distribution is nearly balanced (51% Female / 49% Male). Inpatient admissions account for **67% of total volume**, signaling high-acuity case mix and significant bed capacity utilization.

# Patient Status Analysis

## Outcome Breakdown

**65.3%** of patients achieved normal recovery — the primary clinical success indicator. Readmissions represent **19.7%** of total volume, a critical area for care coordination improvement.

- ICU utilization: 3.3% — reflects appropriate critical care triage
- Mortality rate: 3.4% — within expected benchmarks for mixed-acuity settings
- Discharge rate: 8.3% — standard transitional care pathway

# Treatment Cost Overview

\$404K

Total Treatment Cost

Aggregate expenditure across all patient encounters

\$161

Avg Cost per Patient

Benchmark for cost-efficiency monitoring

1,679

Inpatient Admissions

Highest-cost patient segment

827

Outpatient Visits

Lower-cost, high-volume segment

Inpatient care drives the majority of total expenditure. Monitoring per-patient cost trends alongside length of stay will be essential for sustaining financial performance while maintaining quality outcomes.

# Speed & Capacity Metrics

## Key Efficiency Indicators

Average Length of Stay:  
1.70 Days

Below national average — reflects efficient bed turnover and timely discharge planning.

Average ER Wait Time:  
65.63 Minutes

Exceeds the 60-minute benchmark. Workflow optimization and triage staffing adjustments are recommended.

⚠ ER wait time is the most critical operational gap. Target: <60 minutes.

# Patient Volume by Department

## Department Insights

The Outpatient Department (OPD) handles **32.9%** of total patient volume — the highest workload of any department. Physical Medicine & Rehab and Surgery follow as significant contributors.

- OPD: 824 patients — consider staffing augmentation
- Physical Med & Rehab: 515 — growing rehabilitation demand
- Surgery: 436 — consistent surgical throughput
- OT & Dermatology: combined 411 patients

# Patient Satisfaction Scores

Overall Satisfaction

Patients rating experience as "Good" or "Excellent"

Care Quality Rating

Positive feedback on clinical care and staff professionalism

Wait Time Satisfaction

Lowest score — correlates with ER wait time findings

Would Recommend

Net Promoter Score proxy — strong patient loyalty indicator

**Excellent performance:** 85% overall satisfaction and 91% recommendation rate reflect strong patient-centered care delivery. Wait time satisfaction is the primary area for improvement.

# Findings & Strategic Opportunities

## High Inpatient Volume

67% inpatient ratio drives revenue but requires robust bed management and staffing alignment.

## Excellent Patient Satisfaction

85% satisfaction and 91% recommendation rates are strong differentiators worth protecting.

## Heavy OPD Workload

OPD leads all departments at 824 patients — staffing and scheduling optimization is warranted.

## ER Wait Time Gap

65.63-minute average exceeds the 60-minute benchmark — a clear operational improvement target.

## Readmission Reduction

19.7% readmission rate presents a measurable opportunity for care coordination and follow-up programs.

# Next Steps for Operational Excellence

1

## Optimize ER Workflow

Implement fast-track triage protocols and adjust peak-hour staffing to reduce wait times below 60 minutes.

2

## Improve Patient Follow-Up

Launch structured post-discharge outreach programs to reduce the 19.7% readmission rate.

3

## Strengthen High-Load Departments

Augment OPD and Physical Med & Rehab staffing to match current patient volume demands.

4

## Monitor Treatment Costs

Track per-patient cost trends by department to identify efficiency opportunities without compromising care quality.

5

## Sustain Satisfaction Initiatives

Continue patient-centered care programs that drive the 85% satisfaction and 91% recommendation scores.

**Conclusion:** Overall hospital performance is strong. Focused investment in operational efficiency and readmission reduction will drive the next level of clinical and financial excellence.
